INSTALLATION GUIDE

	Minimum configuration:	**Best for new installs:**
SCSI interface:	Adaptec SCSI 2920	Adaptec SCSI 2940
Machine:	Pentium 2	Pentium 4
Memory:	RAM 256MB	RAM 512MB
Hard Drive:	20GB	40GB

Operating Systems:

Windows 2000	For networks must allow VersaIMAGE to write to the Ivision / VersaIMG directory.
XP	Use XP PRO for networks sees above note.
NT 4.0	Must have Service Pack 3 or later (Service pack 6 is preferred)
Required files:	Jet4 Service Pack 3
	MDAC 2.6 (Do not use 2.7 see note below)

NOTE: With VersaIMAGE 6.1.172 the Jet 4 and MDAC files are located on the installation CD. The files are also on our website www.versaimage.com approximately at VersaIMAGE release level 6.1.170 Microsoft Corporation changed the configuration of the MDAC file. The jet file was removed. This is why you must load jet 4 service pack 3 on certain installs to get VersaIMAGE to run properly. (Language MDB error)

Warning:
If MDAC Service pack 2.7 is installed on a new machine that you want to install VersaIMAGE on, VersaIMAGE will change the MDAC back to 2.6. You must, after the VersaIMAGE installation reinstalls MDAC 2.7 to put the machine back to its previous level. DO NOT INSTALL MDAC 2.7 before you install VersaIMAGE.
