

# MicroDAX 5.0™

## Minolta Imaging Software

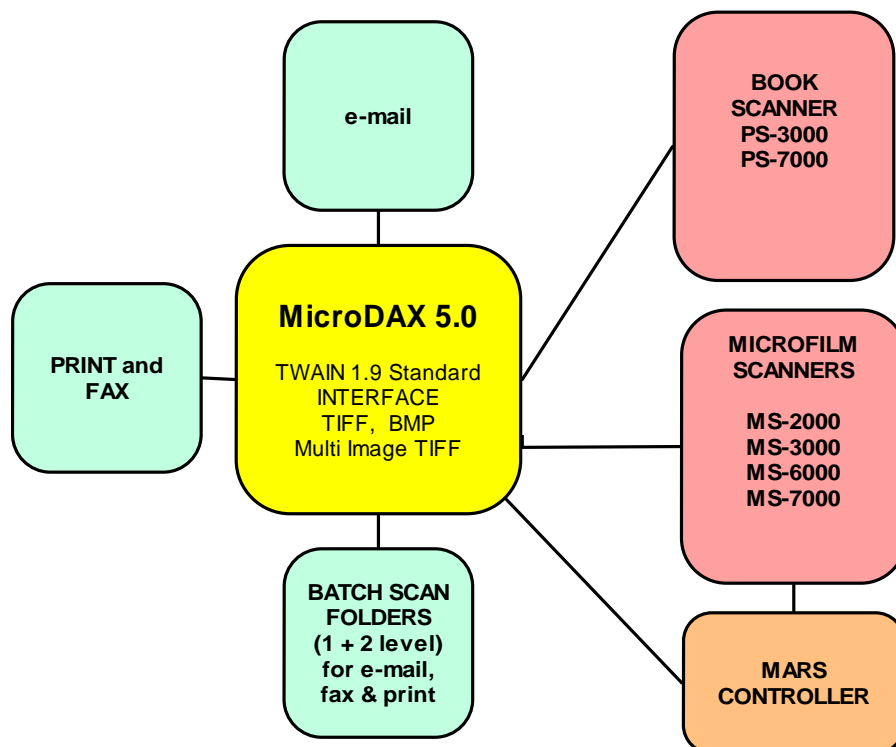

---

**MicroDAX 5.0™** imaging software has been specifically developed for Minolta book and microfilm scanners in partnership with Minolta Corporation. The software quickly locates, scans and distributes single or “batched” images from paper, microfiche, microfilm jackets, aperture cards or roll microfilm.

MicroDAX 5.0 supports manual or Minolta Automated Retrieval System (MARS) roll film retrieval with **1 and 2 level “blipped” film search and batch scan capability**. (Note: Three (3) level microfilm and automated retrieval of un-blipped microfilm using universal film carriers and BlipChip™ film controllers require the use of our VersalMAGE software). For **book** or **check scanning** applications the new **MicroDAX 5.0 grayscale** imaging features prove invaluable for *top quality image production*.

MicroDAX 5.0 software features simple “**Input**” – “**Process**” – “**Output**” set-up windows that allow selection of desired scanner settings, popular image processing options and required image distribution features. MicroDAX 5.0 Imaging Software uses the TWAIN interface standard, is economical, easy to use, 32 bit and Microsoft Windows-95, 98, ME, Windows 2000, and Windows XP compatible

**Software Support:** The software price includes software upgrades and two years of unlimited telephone support. Telephone support is offered between the hours of 9 AM and 5 PM EST, except weekends and standard USA holidays. Live telephone support featuring experienced micrographics personnel is invaluable especially for roll microfilm and MARS applications.

## The following features make Microdax 5.0 truly the most cost effective answer to low cost professional imaging software:

- **“Input” set-up window offers all scanner adjustments**
  - Grayscale scanning
  - Book scanning modes
  - 1 and 2 level film search with batch scanning
  - Check scanning, bi-tonal or grayscale
  - Multiple page sequence scanning from memory with MARS
  - Job control, automated rescanning of selected images by MARS
  - Set hardware specific image processing features: brightness, contrast, text mode, photo mode, halftone and film type
  - Automatic image processing support:: de-skew, brightness, focus, frame elimination and mask mode
  - Image manipulation: rotate, split, merge, flip, crop, annotation
  - Integrated preview
  
- **“Processing” set-up window offers full image processing selection**
  - Check stacking bi tonal or gray scale,
  - Horizontal and vertical flip
  - Image cropping
  - Image rotation
  - Horizontal or vertical image split
  
- **“Output” set-up window offers image distribution options**
  - Image batch distribution folders with path selection
  - Multi image Tiff, Tiff or BMP output format selection
  - e-mail
  - Fax & Print

### Software expansion and upgrades:

The MicroDAX-5.0 Software is expandable to include additional custom features. Please contact us for further information and development price quotations.

**VersaIMAGE:** For 1, 2 & 3 level searching, utilizing most any micrographics reader controller, DAR 1600 / DAR2800 cameras, MS-Access and MS-SQL database CAR interfaces, Hybrid analog and digital Image CAR applications, data/image import and export, Bar Code, full text OCR with search capability, CD pre-mastering, VersaViewers and extensive data indexing capability, please visit us at [www.versasoftware.com](http://www.versasoftware.com)
