

VersaIMAGE-GOLD/PLUS™

... includes hybrid Microfilm Management
NOTE: NOT YET RELEASED!!!!

VersaIMAGE-GOLD/PLUS™ Imaging Software is economical, extremely easy to use single or multi-user Windows document scanning and image management software. VersaIMAGE-GOLD/PLUS uses the Twain and ISIS interface standards for paper and microfilm scanning. The software provides Microsoft "Access" or "SQL Server" database indexing and retrieval capability. Database search arguments may be coupled with image OCR FUZZY text search capability to provide quick retrieval to the individual document level within file folders.

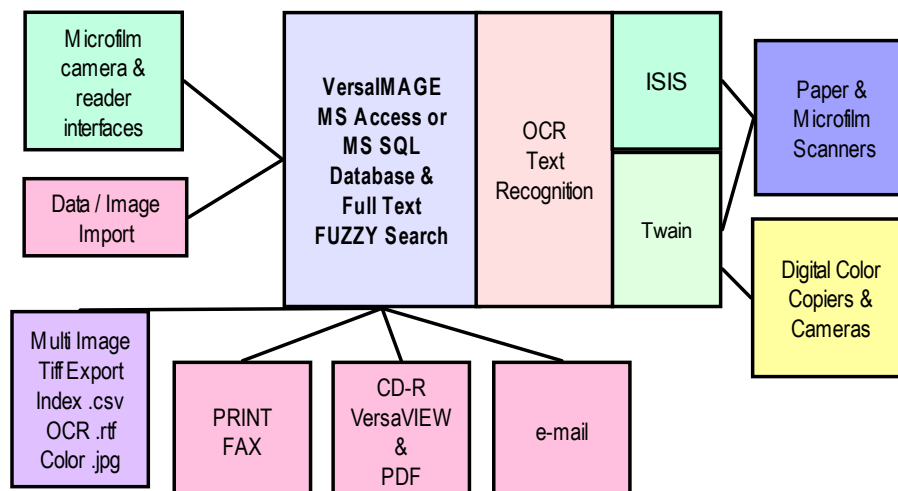

The **VersaIMAGE-GOLD/PLUS™** software additionally to its standard **GOLD** features offers Computer Assisted Retrieval (CAR) microfilm capability with search programs for 1, 2 and 3 level microfilm. Legacy interfaces exist for most microfilm readers, cameras and ISIS or TWAIN controlled microfilm scanners. Automatic roll and batch scanning modes for microfilm scanners & paper scanners offer total hybrid image management. The folder scanning mode uses computer keyboard function keys to allow computer novices to master the scanning process in minutes eliminating customary costly training time. VersaIMAGE-GOLD/PLUS file folders may contain various image types such as digital camera color images (jpg & bmp), single and multi-image tiff images. Standard features include Index, OCR text conversion with full text search, image import / export modules, image distribution folders with output to file, PDF conversion, CD, print, fax, e-mail in single and multi-image Tiff, jpg, PDF or bmp format. Automated microfilm indexing and quality control data/image editing modes are standard features of **VersaIMAGE-GOLD/PLUS™**.

VersaIMAGE-GOLD/PLUS can be set up to automatically index each folder with the current scan date and image address. It allows folder name and description indexing from paper, film or digitally scanned images from zoom zones. Automatic database field indexing via bar codes that are matched with imported data files provides powerful "look-up-append" capability.

Important "Easy-key" features of the VersaIMAGE-GOLD/PLUS edition:

- F-2 Scan first image into NEW Folder from film or paper
- F-5 Scan next film frame or all additional documents
- F-6 (press twice) Re-scan image
- F-3 Insert image "in front of" highlighted thumbnail image on the screen

VersaIMAGE-GOLD/PLUS™

VersaIMAGE-GOLD/PLUS (Full Text/OCR) Document Imaging Software Features:

General:

- Five security levels and automatic user log-off network timer feature
- Optional image view, transfer, print, fax, e-mail HIPAA audit tracking by user
- Easy “by user” database application setup module with unlimited applications allowed
- Microsoft ACCESS database is the standard feature (SQL optional)
- [Legacy RS-232/SCSI driver interfaces for automated microfilm readers, cameras and microfilm scanners](#)

Scanning modes:

- TWAIN (B+W and color), ISIS (B+W)
- Imaging Options: Single image tiff, jpg, bmp with or without folders, multi image tiff
- 2 keyboard button (F2 & F5) folder scan / index mode for novice users!
- Rescan, insert, append from keyboard using the F6, F3 and F5 keys!
- Batch scanning mode with our “VersaImage” separator sheets
- [Hybrid paper & microfilm 1, 2 and 3 level roll film CAR search and automated file/batch scanning modes](#)
- Automatic “split images to folders” function using “VersaImage” separator sheets
- Manual split folder function by “tagging” images with subsequent F12 key actuation

Indexing:

- Easy (csv & ASCII) data & image import module
- Batch indexing with optional single or multiple Bar Code/OCR zone recognition
- [Microfilm “match on blip” index append feature for automated CAR film to CD conversion](#)
- Index imported color and b+w images from digital cameras in MS ACCESS database
- Look-up append allows key data field matching with imported data files
- (up to 20 database fields that can be auto-filled with imported .csv or .ascii files)
- Auto increment, auto date, table verify, double key & check digit indexing function
- Automatic FULLTEXT OCR indexing of all image files
- OCR menu allows custom OCR application for image, files, batches & retakes

Searching:

- Search database with “contains”, “starts with”, “exact” and “range” search arguments
- [Adjustable fuzzy text search](#) filter for image OCR text search flexibility. “Click on image” feature displays OCR image text file with yellow OCR “hit” highlights
- “Standard” button switches OCR “hit page” to correct image location within file folder
- Print “hit list” feature allows print formatting of desired database hit list fields
- Register CD function builds cumulative index on hard drive for Versa distribution CD’s

Display:

- Image display in thumbnail or single image view with page-up / page-down scrolling
- Adjustable split screen display shows multiple database “hits” with images
- Image correction options selectable for image, batch and folders
- Image editing options (de-skew, rotate, highlight, redact, annotate, crop, etc.)
- Distribution folder content display
- “Click on image” OCR full image text display

Distribution:

- Retrieved images may be placed into user defined distribution folders
- Fax, print, file transfer, e-mail from database files or distribution folders
- One click-OCR image text transfer to clipboard or text editor function
- Simple (csv & ASCII) data, image and OCR text export
- “On demand” PDF conversion capability for image file folders and distribution folders
- Build CD mastering feature to work with PDF Acrobat viewer
- Build CD mastering feature to work with VersaVIEW-GOLD viewer software that contains index data, images and OCR data (.rtf) on searchable CD
