

VersaIMAGE 32™

VersaIMAGE-Platinum™ Edition

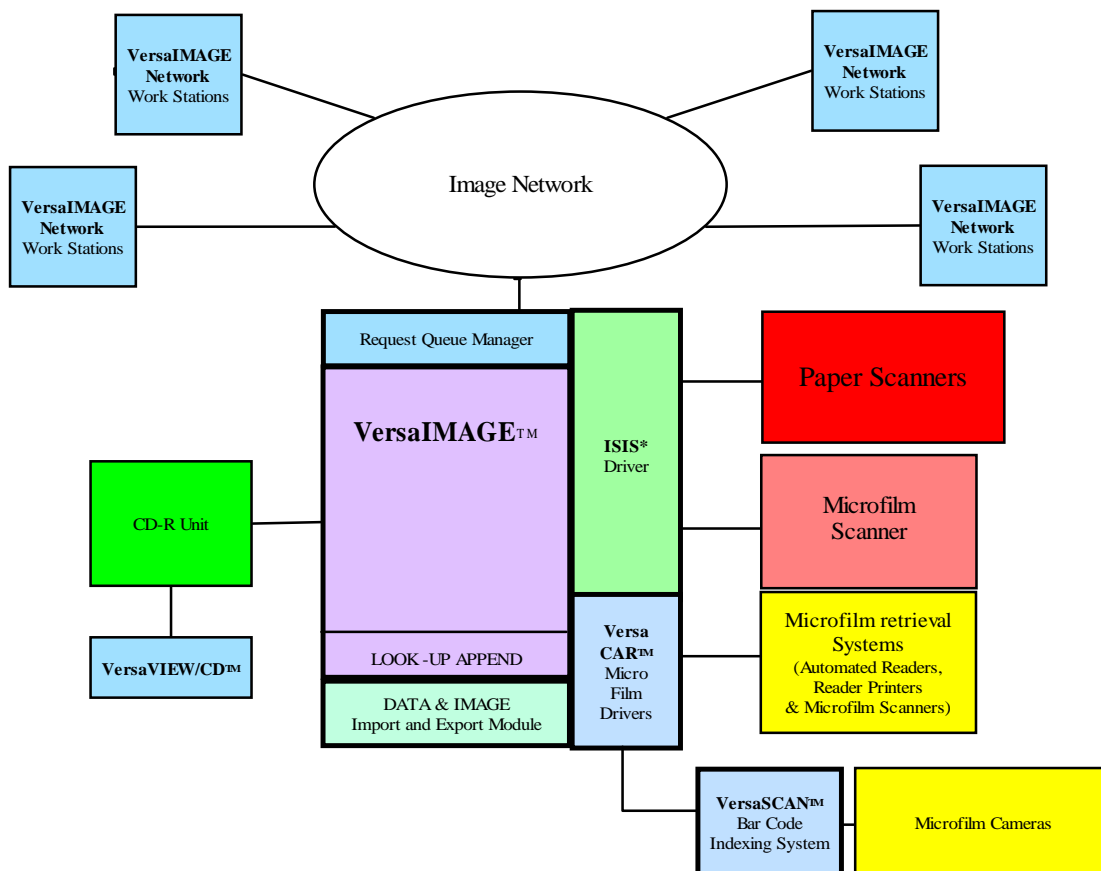

The **VersaIMAGE 32™ Software** is a 32 bit Microsoft Windows-95 or Windows NT based microfilm retrieval and digital scanning system. In addition VersaIMAGE 32 can provide ISIS paper scanning capability together with digital (TIFF) image and analog microfilm image management. VersaIMAGE 32 utilizes the Microsoft "Access" database for low to medium volume and "Sequel Server" (VersaIMAGE-Platinum™ Edition) for high power Client/Server applications. VersaIMAGE 32 offers on-line digital image and automated microfilm retrieval with subsequent image distribution via fax, e-mail, network printers or CD. The VersaIMAGE 32 "INDEX" module allows data entry and indexing of images from paper, microfilm or digitally scanned images. Additional Edit, QC and Indexing functions are available in a network environment. Bar Code and OCR recognition capabilities are furnished as standard indexing tools in the VersaIMAGE 32 edition only.

Important features of the VersaIMAGE 32 edition are:

- Universal (Year 2000) CAR Microfilm Software Drivers
- Drop - down Film Controller Keypad
- Batch / Range Scanning and Printing
- VersaIMAGE 32 uses MS Access database
- Multi - level Scanning
- Check Image Stacking
- Film, Paper & Image Indexing
- CD pre-mastering and distribution
- VersaIMAGE 32 Platinum Edition for Client / Server applications

VersaVIEW™ is an image viewer, which expands the capability of all VersaIMAGE 32 products to users at remote sites or on the same network. It allows users to view, print, e-mail or fax images from the VersaIMAGE 32 database or VersaIMAGE 32CD's. Newly registered CD's automatically update the main index file on the computer's hard drive.

The VersaIMAGE 32 / Platinum Edition

VersaIMAGE 32 and VersaVIEW 32 Features:

- **VersaIMAGE 32 Edition** is a PC-based document management system for digital as well as analog CAR microfilm images. VersaIMAGE 32 provides full Microsoft Windows 95 and Windows NT based microfilm and digital image management with built in CD-R pre-mastering capability.
- **VersaIMAGE 32** interfaces with ISIS compatible film and [paper scanners](#). Paper scanners may be single sided or duplex (both sides) slow or high speed, with or without batch control cards. VersaIMAGE 32 contains an extensive paper scanner image management module for single, batch, re-scan, QC and indexing functions. **VersaIMAGE 32** interfaces also with standard [microfilm cameras](#) with or without Bar Code capabilities.
- **VersaIMAGE 32** offers manual or fully automatic microfilm film scanning/printing with automatic electronic file folder generation for indexed blips or image marks. VersaIMAGE 32 *automatically creates electronic file folders* on multi level, blipped microfilm with automatic insertion of scanned images into appropriate new electronic folders. Most unblipped microfilm may also be converted automatically with the image / page sensor feature of the Fuji M-Drive. Scanned images may easily be written to CD-R for image distribution purposes, via the VersaIMAGE 32CD pre-mastering software. For bank applications VersaIMAGE 32 offers “check-stacking” combining front and back of selected check images in a single image.
- **VersaIMAGE 32** contains universal [CAR microfilm management](#). VersaIMAGE 32 drives virtually all competitive automatic microfilm retrieval controllers on the market today. A unique “drop-down” controller keyboard offers customary microfilm retrieval and scanning functions! With the use of microfilm scanners one may limit microfilm retrievals to one time only events. A microfilm scanner must scan all images first before it can display, fax, e-mail or print images. All such *scanned* images may be then being stored and cross-referenced automatically in the *VersaIMAGE 32 database*. Thus VersaIMAGE 32 allows continued conversion of film images to digital images in normal daily use. Additionally, VersaIMAGE’s automatic film conversion mode converts entire rolls or sections of microfilm to digital images!
- **VersaIMAGE 32 contains all standard VersaCAR for Windows YEAR 2000 ready features!** Replaces costly to maintain and less flexible (Year 19XX limited) single or multi level blip microfilm CAR software *and offers extremely easy to use paper, microfilm scanning and CD capability!*
- **VersaIMAGE 32 is perfect for Service Bureaus!** Import external (TIFF Group-4) image data from one source and database information from another into VersaIMAGE 32 for easy matching of images and data in its “append” module. Export images and index data to CD for use with VersaVIEW 32!
 - ***Index your images*** from paper (at the scanner and/or microfilm camera), film (at the reader with auto advance) or from the computer monitor screen. Use existing on-line databases or key from the images with the VersaIMAGE 32 “zoom zone” feature.
 - Export to other imaging systems or CD’s and use **VersaVIEW 32** to retrieve images at remote sites.
