

## NEW Product Announcement:

# VersaIMAGE-GOLD Reduces Image Indexing Requirements! Automated Tiff Image to Full Text Conversion Delivers Astounding Full Text Search Capability!

The VersaIMAGE GOLD PROGRAM is available:

**VersaIMAGE 6.2.0** allows scanning of documents without the need to manually index database fields. The search index is created automatically by the VersaIMAGE system using full text OCR for each Tiff image. All images are converted to full text "on the fly". The software supports single and multi image Tiff formats. VersaIMAGE automatically adds the scan date allowing scan date "Range" searches coupled with full text content search arguments.

Entries into the OCR SEARCH field may be made as follows:

1. **No quotes used:** Results will be an **OR** search such as **John Smith** will find all **John** or all **Smith** references or both. NOTE: The system is not case sensitive in this mode!
2. **Using single or double quotes:** This is an **EXACT** text search and is case sensitive! Exact search terms may be coupled with the word **AND** / **OR** as shown in the example below:

*"John E. Smith" AND "October 14, 1998" will yield the exact name and date search as shown. "John E. Smith" AND "October" AND "1998" OR "November" OR "December" will yield related search matches.*

3. VersaIMAGE automatically enters the scan date into a "scan date" field allowing scan date range searches such as all scanned images between May 1, 2002 and July 31, 2002 Coupling this feature with batch numbers and OCR full text search capability virtually eliminates document indexing in many cases\*!
4. A OCR search displays a "hit list" of Tiff images containing the required text. Right click on the displayed Tiff image and look at the OCR text showing the "found" text in yellow highlight marks.

\*Prime Key field indexing from Bar Code or OCR zoned data fields is still available!

### NEW: IMPORT of COLOR or GRAYSCALE IMAGES into VersaIMAGE:

Version 6.2 VersaIMAGE allows import of BMP and JPG images via the VersaIMAGE Tools/IMPORT Images feature. Digital cameras can be used to produce these images in a file in your PC. From there the files can be imported into the VersaIMAGE database. TWAIN driver scanner input for color scanners and digital cameras!
